

About Us

MATERION is the new name for Brush Engineered Materials Inc. and all of its businesses, including what you have known as Brush Ceramic Products Inc. Now under the Materion brand, the renamed MATERION CERAMICS has been part of the Tucson community since 1980, producing high performance engineered materials for the global electronics market. The Tucson operation produces materials for computer and telecommunications equipment, automotive electronics, aerospace and defense, oil and gas, and industrial product applications. MATERION CERAMICS operates on a nine-acre site at 6100 S. Tucson Blvd., using state-of-the-art equipment and the latest computerized process control methods. The plant, opened in 1980, occupies 50,000 square feet under roof and employs nearly 100 people.

MATERION CERAMICS operations go far beyond simple machining or assembly. We have an extensive manufacturing process that begins with a detailed recipe for formulation and progresses through many types of forming, machining, firing, and metallizing operations. The facility recently achieved ISO certification, further validating the "world-class" quality of our operations.

We are proud of the work that is done in Tucson and the contributions our products make to society. MATERION CERAMICS, *Improving the Way We Live.*
