CO₂ Filters

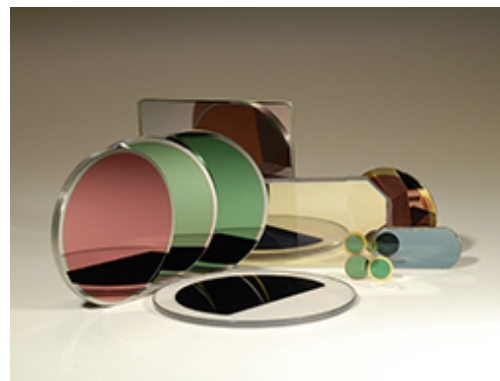

Precision Coatings provides a broad range of mid-wave through long-wave IR gas sensing filters which can be customized. For example, our $\lambda = 4.27 \mu\text{m}$ filters and beamsplitters enable quantitative analysis of CO₂ in a patient's breath by absorption spectroscopy. When gas sensor manufacturers need optical filters for life-critical applications in healthcare, they turn to Materion.

Product Spotlight ProIR

Our line of ProIR filters are now available in stock offering spectral characteristics that are far superior to the competition. To better support the R&D phase or low rate initial production (LRIP), these off-the-shelf products allows for rapid prototyping and cost-effective experimentation.
