FLEX Semi

Our team attended the Flexible Hybrid Electronics Conference and Exhibition (FLEX) and MEMS & Sensors Technical Congress (MSTC) at the end of February. The event showcased flexible hybrid and printed electronic products, materials and applications. With 4 keynotes, panels, technical sessions, deep-dive tech talks, networking opportunities and nearly 50 exhibitors with more than 400 attendees it was a busy week. Materion's flexible sputtered film coatings help enable these technologies in medical, flexible electronic, and advanced materials industries.

Product Spotlight Thermal Imaging Filters

We deliver a high signal-to-noise ratio for less noise and an enhanced thermal image. Our engineers and scientists understand the need for rugged, high-performance thermal imaging equipment and have solutions to many challenges of military-grade systems.
