### Upcoming Events Flexible Electronics

It's not too early to be thinking about [FLEX](#), February 24-27, 2020 in San Jose, CA. We are already planning our exhibit where flexible hybrid electronics is highlighted in a rapidly developing technology leading changes in IoT, smart medtech, smart automotive, smart manufacturing and more.

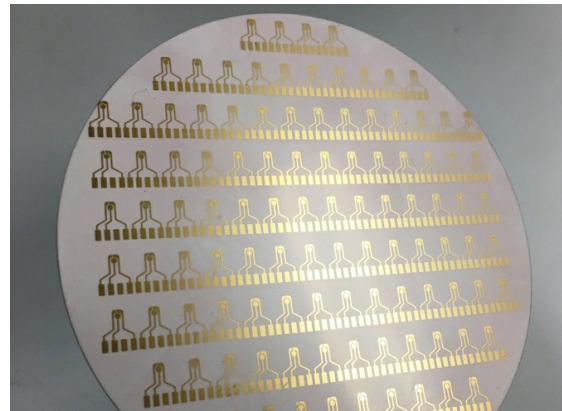

Check our [event](#) page often for updates.

### Product Spotlight Patterned Circuits

We specialize in sputtering thin films onto flexible substrates by employing innovative laser ablation technology that focuses on thin film circuits and the requirement to produce patterns on large area flexible substrates. Our offerings deliver broader value with additional circuit features and customized services.

- Custom fabrication and patterning
- One-stop development to production
- Unique scale-up path for roll-to-roll deposition and sensor patterning
